## Large <br> Diameter Tapcon (LDT) Anchors

Finished head, Removable Anchor

LDT
(3/8" \& 1/2") (5/8" \& 3/4")
Sawtooth"

Uses standard drill bitsno special drill bits to purchase or lose!

## DESCRIPTION/SUGGESTED SPECIFICATIONS

 Self-threading Anchors -
## SPECIFIED FOR ANCHORAGE INTO CONCRETE

The LDT anchor is a high performance anchor that cuts its own threads into concrete. Anchor bodies are made of hardened carbon steel and zinc plated, Grade 5.

The anchors shall have a finished hex washer head with anti-rotation serrations to prevent anchor back-out. The head of the anchor is stamped with a length identification code for easy inspection.

The hole shall be drilled with carbide tipped hammer drill bits made in accordance to ANSI B212.15-1994.

## ADVANTAGES

## SAVE TIME

## EASILY INSTALLED

Installs in less than half the time of wedge anchors or adhesive anchors

- Simply drill a pilot hole and drive the LDT anchor by hand or impact

## EASILY REMOVED

- No torching or grinding required to remove anchors

## SAVE MONEY

## LOWER DRILL BIT COSTS

Use standard ANSI bits instead of proprietary bits

- Single piece design, no nut and washer to assemble

## USE STANDARD ANSI BITS

- No special proprietary bits to purchase or lose
- Reduce chances for anchor failure due to incorrect bit usage

## Sawtooth Threads'" diameters available on 5/8" and 3/4"

## IMPROVED PERFORMANCE IN LARGE DIAMETER HOLES

- Superior performance to wedge anchor
- Higher loads in shallow embedments
- Closer edge/spacing distance than mechanical anchors
- More threads for better thread engagement and higher pullout resistance
- Durable induction-hardened tip

## EASY INSTALLATION

- Easy 2-step installation, simply drill a pilot hole and drive
- Installs in less than half the time of a wedge anchor
- Efficient thread cutting
- Use standard drill bit sizes
$\square$ Single piece design-no nut and washer assembly
■ Easily removed

## APPLICATIONS

## INSTALLATION STEPS

FEATURES

Racking, shelving and conveyors are just a few high volume applications ideal for Large Diameter Tapcon (LDT ${ }^{\text {TM }}$ ). The ease and speed of installation of the LDT can reduce installation time to less than half the time of typical systems used today.

For installation speed, high performance and easy removability, LDT is the anchor of choice.

The LDT's finished head and lack of exposed threads virtually eliminates tire damage on fork lift trucks.

Easy Installation
Installs into concrete by hand or impact wrench
Anti-rotation Serrated Washer

- Prevents anchor back-out

Extra Large Hex Washer Head

- With increased bearing surface

Length Identification Head Stamp

- For embedment inspection after installation

## Hi-Lo Threads

-Cuts its own threads into concrete for greater pull-out resistance

Installation Steps for Concrete, Lightweight Concrete and Metal Deck

1. Using the proper size carbide bit (see chart) drill a pilot hole at least 1 " deeper than anchor embedment.
2. Using an electric impact wrench, or socket wrench (hand install) insert anchor into hole and tighten anchor until fully seated. (see chart for socket size) (do not over tighten).

Installation Steps for Hollow or Grout-Filled CMU
( $3 / 8$ " and $1 / 2^{\text {" }}$ diameter)

1. Using a $5 / 16^{\prime \prime}$ (for $3 / 8^{\prime \prime}$ LDT) or 7/16" (for $1 / 2^{\prime \prime}$

LDT) carbide tipped bit, drill a pilot hole at least 1 " deeper than anchor embedment.
2. Using a socket wrench insert anchor into hole and hand tighten anchor until fully seated.
(9/16" socket for $3 / 8^{\prime \prime}$ and 3/4" socket for $1 / 2^{\prime \prime}$ )
(do not over tighten).

LDT's can be installed with an impact wrench in solid concrete only
Installation by hand-is easy, simply using a socket wrench

Installation by impact wrench—is recommended for faster installations or for high volume projects. Installation with impact wrench-is not
recommended for hollow block.

See page 75 for effective lengths and length indication code.

Carbon Steel with Zinc Plating: Meets ASTM B695 and B633 specifications for zinc plating of $5 \mathrm{um}=.0002^{\prime \prime}$ thickness. This coating is well suited for non-corrosive interior environments.
Stainless Steel: Provides additional corrosion protection for outdoor applications.

*Edge and spacing distance shall be divided by .75 when anchors are placed in structural lightweight concrete. Linear interpolation may be used for intermediate spacing and edge distances.
For $5 / 8^{\prime \prime}$ and $3 / 4^{\prime \prime}$ LDT Anchors, the critical edge distance for these anchors is 10 times the anchor diameter. The edge distance of these anchors may be reduced to $1-3 / 4^{\prime \prime}$ provided a 0.65 load factor is used for tension loads, a 0.15 load factor is used for shear loads applied perpendicular to the edge, or a 0.60 load factor is used for shear loads applied parallel to the edge. Linear interpolation may be used for intermediate edge distances.

* Edge and spacing distances shall be divided by .75 when anchors are placed in structural lightweight concrete. Linear interpolation may be used for intermediate spacing and edge distances.
** $15 \%$ = shear load applied perpendicular to the edge
*** $60 \%=$ shear load applied parallel to the edge

## PERFORMANCE TABLE

## LDT Anchors

Ultimate Tension Load (Ibs/kN) in Concrete Block (anchors should be installed by hand in hollow block)

| ANCHOR DIAMETER |  | EMBEDMENT DEPTH |  | HOLLOW CONCRETE BLOCK |  |  |  | GROUT FILLED CONCRETE BLOCK |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | TENSION | SHEAR |  | TENSION |  | SHEAR |  |
| in. | (mm) |  |  | in. | (mm) | lbs. | (kN) | lbs. | (kN) | lbs. | (kN) | lbs. | (kN) |
| 3/8 | (9.5) | 1-1/2 | (38.1) | 916 | (4.1) | 3,176 | (14.1) | 1,592 | (7.1) | 3,900 | (17.3) |
| 1/2 | (12.7) | 2-1/2 | (63.5) | N/A |  | N/A |  | 5,924 | (26.4) | 6,680 | (29.7) |

To calculate the Allowable Load of the anchor, divide the Ultimate Load by 4.
